RE: New U.S. Patent Application
Applicant: Eric RAFFAELE, et al.
Title: "PROCESS FOR EXECUTING A DOWNLOADABLE..."
Our Ref.: B-4504DIV 621038-6

Please amend the original claims 1, 2, 3, 12, 13, and 15 as indicated below.

1. (Currently Amended) A process for executing a downloadable service with specific access rights to at least one profile file in a user's computer, said computer comprising a web browser communication to the Internet or intranet via a first communication port and socket, said process being characterized in that it involves the steps of:

- arranging a confined run time environment [(11)] which is assigned a second communication port and socket and providing restricted access to at least one profile file;
- downloading said service through said second communication port so that it is received by said confined run time environment [(11)]; and
- executing said service within said confined run time environment whereby said service is given an access to said at least one profile file in a secure environment.

2. (Original) The process according to claim 1 characterized in that said confined run time environment is an extended sandbox having restrictive access to said at least one profile file.

3. (Currently Amended) The process according to claim 2 characterized in that the service is downloaded under the form of a set of java code [containing classes structure] containing class structures packaged within a signed archive file. Three parts compose the service: remote Internet data, a list of requested data that are needed to personalise the service, and code to sort remote Internet data using requested accessible data.
